

## CHEMISTRY IS COOL

I have always been interested in Chemistry by doing experiments at home, in the kitchen and bathroom, using detergents and liquids or anything I could lay my hands on. A wide assortment of coloured liquids in small bottles is proof of this effort.

But learning Chemistry this year as a separate subject was the best thing that happened. At home I would just mix anything and watch it change colour, sizzle or stink. However, at school I learnt the scientific aspect of it. For example instead of only knowing which two substances mixed to form a certain colour, I learnt why they changed colour too. Now when I mix two things together, I imagine how I would one day do this in a professional research laboratory. I think my future just got confirmed, as I believe that learning Chemistry is the best thing that happened to me this year.
